Summary

Data Engineer with 5+ years of experience in designing scalable data engineering solutions across GCP and Azure ecosystems. Proficient in PySpark, BigQuery, Databricks, Apache Airflow, and cloud-native ETL/ELT architectures. Demonstrated success in migrating legacy SAS workflows, optimizing large-scale data pipelines processing over 100M records daily, and implementing reliable, production-grade data solutions with a strong focus on performance, scalability, and data quality.

Technical Skills

Cloud: Google Cloud Platform (BigQuery, Dataproc, Dataflow), Microsoft Azure

Data Warehousing: Google BigQuery, Star Schema, Data Modeling, Databricks

Data Processing: PySpark, Apache Spark, Pandas

Data Engineering: ETL, ELT, Batch Processing, Data Pipelines, Data Quality

CI/CD & Tools: Apache Airflow, Apache Kafka, Git, Docker

Experience

Data Engineer, TCS – Gandhinagar, Gujarat

July 2021 – Present

- Led the design and implementation of scalable batch ETL/ELT pipelines using PySpark and BigQuery, processing 100M+ records daily for credit risk analytics.
- Migrated legacy SAS-based ETL workflows to cloud-native GCP solutions, reducing operational costs by 50% and improving processing efficiency.
- Optimized BigQuery workloads using partitioning, clustering, and query tuning techniques to reduce cost and improve performance.
- Designed and implemented star schema data models to support scalable analytics and reporting in Google Looker Studio.
- Collaborated with business stakeholders to translate requirements into reliable, analytics-ready data solutions.
- Implemented robust data quality checks, validation frameworks, and error handling mechanisms to ensure data accuracy and consistency.
- Automated and orchestrated production-grade data pipelines using Apache Airflow and integrated ETL workflows with CI/CD pipelines using Git.
- Took ownership of end-to-end data pipeline development, from requirement gathering to deployment and optimization.

Personal Project

Smart Manufacturing Analytics Platform (Azure Databricks)

- Built a real-time lakehouse platform to process manufacturing sensor data using Azure Databricks and Delta Lake.
- Designed Bronze, Silver, and Gold layers to ingest, clean, and aggregate IoT telemetry from 500+ simulated industrial machines.
- Implemented Structured Streaming with Auto Loader to process incoming sensor events and maintain near real-time analytics.
- Optimized Delta tables using partitioning, OPTIMIZE, and ZORDER, reducing query latency by 45%.
- Developed Power BI dashboards to monitor machine health, downtime trends, production efficiency, and anomaly detection KPIs.

Education

M.Tech in Machine Learning DAIICT Gandhinagar

Aug 2019 – June 2021

- CPI: 8.71/10.0

BE in Electronics & Communication, GEC Gandhinagar

June 2014 – May 2018

- CGPA : 7.92/10.0

Certification

- Google Cloud Professional Data Engineer
- Google Cloud Professional Machine Learning Engineer
- Databricks Certified Data Engineer Associate
